

## Poisonous Plants for Rabbits

by Cindy Fisher

**How to use this list:** Many plants listed here are not all poisonous, only parts of them are. Apple is a good example: the seeds are poisonous, but the fruit is perfectly fine for rabbits. Read the complete listing of the plant to get details regarding which parts to avoid. If no parts are listed, assume that the whole plant is poisonous and should not be in reach of your rabbit. Use common sense when it comes to your rabbit's well being; it is better to be safe than sorry.

Resources used were *House Rabbit Journal*, The San Diego Turtle and Tortoise Society, and a posting of poisonous plants made available to America OnLine. Special thanks to Ellen Welch who searched persistently through her rabbit resources to obtain this list for us.
